Abstract

The present invention relates to an image forming apparatus comprising a plurality of movable image carriers, a movable intermediate transfer body, and contacting means separably contacting to said intermediate transfer body at a contacting position. Said image carrier located most closely to said contacting position in a direction extending along said intermediate transfer body on a downstream side in a moving direction of said intermediate transfer body with respect to said contacting position. Said image carrier located most closely to said contacting position in a direction extending along said intermediate transfer body on an upstream side in a moving direction of said intermediate transfer body with respect to said contacting position. A toner image formed on said intermediate transfer body is again transferred onto a transfer material after passing through said first transfer position and said second transfer position. And formula La - Sa

Lm is satisfied where a distance from said contacting position to said first transfer position along the moving direction of said intermediate transfer body is set as La, where a distance from said exposing position on said first image carrier to said first transfer position along the moving direction of said first image carrier is set as Sa, and where an image length formed on said intermediate transfer body is set as Lm.
